**THE EXAMINATION OF CORRELATION AMONG ACADEMIC ACHIEVEMENT, LOCUS OF CONTROL, AND SELF
- ESTEEM IN THE GIFTED AND AVERAGE STUDENTS**

Mortaza Tarkhan

This study has question that academic achievement, locus of control, and self-esteem. Correlations differ among the gifted and average students. ۲۰۰ male students (aged ۱۵ yrs – ۱۰۰ gifted and ۱۰۰ average) completed Rotter's locus of control test, Cooper Smith's self – esteem questionnaire, and an academic achievement instrument (mathematic and science).

T-test was used for the statistical analysis. Results of analysis showed significant differences between the gifted and average students: ۱) The gifted students' self – esteem was higher than average students. ۲) The gifted students' locus of control was internal. ۳) The gifted students' mathematical and science achievement was higher than normal students.

The variances of academic achievement based on locus of control and self – esteem among the gifted students was more than average students. The findings are discussed based on theories of the locus of control and self – esteem. (Persian) pp. ۳۸۵-۳۹۷.
